Clean Energy Finance Europe 2017

Frankfurt, Germany.

8th & 9th
March
2017

The Conference

Clean Energy Finance has been accelerating following the ambitious pledges on clean energy and low-carbon investments, as we continue to see the shift from fossil fuels to renewables, and the declining oil and gas prices, the future looks bright for investors. These key drivers for competitive action and implementation shall determine the key transformations across Europe.

The challenge to scale funding opportunities for climate solutions can be met only by collaborative efforts. This year we address the criteria that ensure all projects should meet and explore performing markets alongside managing the competition.

We shall explore both old and new financing strategies, alongside the latest industry questions; Including the impact of UK's vote to leave the EU, how investors are making cheap renewables a reality and what the future holds for EU power markets.

Confirmed Topics for Discussion:

- Energy Generation: Trends & Forecasts for Next Decade investment
- Renewable Energy Capacity Markets: Developing Vs Developed
- Innovative Finance for Grid Scale Clean Tech Development
- Bringing Clean Power to Developing Countries
- The Rise & Types of Distributed Energy Resources (DER)
- Next Generation Investment Innovations
- Integrating Smart Cities & Electric Vehicles into the Grid

SESSION TWO

Unlocking the Potential from Energy Efficiency and Renewable Energy Sources to meet 2020 Targets

The key to unlocking large scale investment in Europe remains with efficiency as the best de-risk practice. In this session we look at some initiatives and building investor confidence

The Investor Confidence Project (ICP Europe), financed by the EU Commission's Horizon 2020 programme has the potential to de-risk energy efficiency investments. The ICP approach addresses the needs of investors looking for standardised projects that reduce the time, risk, and costs involved in funding energy efficiency building retrofits
